Pedaling for Parkinson's

Pedaling a bicycle may change the life of someone with Parkinson's disease. Research conducted at the Cleveland Clinic showed a 35% reduction in symptoms by the simple act of pedaling a bicycle at the rapid pace—optimally, 80-90 revolutions per minute. Fast pedaling is not a cure of Parkinson's disease and should not be touted as such, but there is compelling evidence to show that it does make a real difference for many who try it. We do know that fast-paced cycling is changing the lives of increasing numbers of participants who, before this, had no hope beyond medication and eventually surgery to slow the progression of their disease.

Program Requirements

- Be age 30-80+ years
- Be diagnosed with Idiopathic Parkinson's Disease
- Complete and submit a signed consent form and medical clearance
- Agree to periodically monitor progress
- May *not* have cardiac or pulmonary disease, uncontrolled diabetes mellitus, uncontrolled hypertension or stroke, dementia, other medical conditions that are contraindicative to exercise.
- Must complete interview with Wellness Director

Program Details

- Every Tuesday, Thursday, Saturday
1-2pm
- Located in the cycle studio
